Check against Simos Fig. 4.9: yaw-rotating test, Vidal de Negreiros 100 %, model 1:90
U = 0.2 m/s, r = 3.13 deg/s (full scale 1.90 m/s, 0.33 deg/s); C_Y = 0.86, l_pC_Y = 0.044
ours, static part only (r = 0)
ours, full model (static + yaw-rate terms)
Simos Fig. 4.9 theory (read by eye, ±1.5)
sway force on hull [N]
yaw moment about midship [N m]
heading ψ [deg] (hull spinning at constant rate while towed)
